

Control the heat pump in your holiday home – even when you're not there!

- Control heat pumps with smartphone and GSM
- Free, easy-to-use app for iOS and Android
- Monitor temperature and humidity
- Built-in calendar function
- Alarm in case of power failure

Control the temperature and humidity in your holiday home!

Turn on the heat pump before leaving your house!

myHome is a new controller from Profort, especially designed for controlling heat pumps in holiday homes and summer houses. Setup the unit, download the free "Profort myHome" app for iOS and Android – and the system is up and running!

Security for holiday home owners

Owners of holiday homes frequently worry about not being able to know if everything is all right when they're absent.

The **myHome** controller monitors temperature and humidity, and the user can turn the heat up and down from his smartphone.

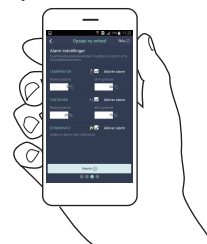

The built-in calendar function allows the user to control temperature over time or on specific dates. The advanced model – **myHome Alarm** – has a built-in room sensor, which alerts the user of intruders.

Both models come with a humidity sensor, which sends an alarm in case of water damage or flooding.

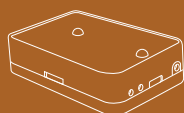

myHome means security for holiday home owners – and is simple and easy-to-use set-up and use.

Download **Profort myHome** – free app for iOS and Android
